

Simulation Program

Strategic goals

Western Health

Western Health Organisational Vision:

Best care in the West

Program mission

Integrate Simulation into Western Health's Quality Improvement Framework and processes, as a tool to diagnose areas of risk, test solutions, and translate recommendations into practice.

We deliver healthcare for the future

Integrate simulation into Western Health's Quality Improvement Framework and processes as a tool to diagnose areas of risk, test solutions, and translate recommendations into practice.

Support and test design and operationalisation of spaces and processes across the health service to identify systems improvements, system inefficiencies, and mitigate risk.

We are better together

Establish in-situ simulations for high-performance multi-disciplinary team training.

Support emergency management and pandemic preparedness.

We care for our people

Build sustainability of simulation delivery through staff training.

We discover and learn

Establish collaborative partnerships with academic and other health service simulation programs.

Support educators to integrate simulation into all education programmes as one of the delivery modalities of the full curriculum in partnership and support of other delivery modes.

We partner with patients and families

Engage consumers as simulated patients in the process of system and quality improvement.
